

Medication Management Module

The **eCase**[®] Medication Management Module mitigates the risks associated with medication administration; eradicating 'paper-based' or outdated systems that may lead to incorrect dosing or timing, distraction and signature omissions.

eCase[®] draws upon the MIMS database of quality, independent medicine information to provide users with comprehensive drug information including photos, interaction data and alternate therapy data.

Fully integrated with the **eCase**[®] Single Client Record Architecture (SCRA), all medication management data is also immediately available within the **eCase**[®] Business Intelligence (BI) Module.

eCase[®] Medication Management provides:

- Clear drug image data
- Integration with ACFI
- Alerts for drug interactions and their severity
- Integration with resident movements
- Tracking of all medications in one repository
- Improves efficiency
- Mitigates compliance risks
- Improves quality of care
